Data

Abstract

The research proposal of our group focuses on the different stressors that first generation students experience compared to non-first generation college students, using Salem State University social work students. Our data will include different psychological, demographical, and mental struggles that students face during their years at college. We will conduct a survey that will be emailed to all social work students that attend SSU, and if they wish to participate they will complete the survey. Considering the limitations that COVID-19 has brought upon students, the survey will be accessed virtually and will remain anonymous to maintain and ensure honest answers from all participants. This is a cross-sectional, as well as quasi experimental study design. Two groups are being compared by using a measurable questionnaire. The researchers in this study are interested in learning about how the stressors that college students face differ from those who are first generation college students, and those who are non first generation. succeed.
